Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 0. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 0 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

\*2 Consumo di energia in base ai risultati della prova campione. Il consumo reale di energia è funzione della maniera in cui l'apparecchio viene utilizzato e della posizione in cui è collocato.
